

# Wireless

Its Amazing Past

# The British

After having dug to a depth of 10 feet last year, traces of copper wire dating back 200 years were discovered.

Their Conclusion:

Their ancestors already had a telephone network more than 150 years ago.

# The Americans

Not to be outdone by the Brit's, in the weeks that followed, an American archaeologist dug to a depth of 20 feet.

Shortly thereafter, a story published in the New York Times:

"American archaeologists, finding traces of 250-year-old copper wire, have concluded that their ancestors already had an advanced high-tech communications network 50 years earlier than the British".

# The Canadians

One week later, a member of Newfoundland's Dept. of Mines and Resources reported the following:

"After digging as deep as 30 feet in Corner Brook, Newfoundland - Jack Lucknow, a self-taught archaeologist, reported that he found absolutely nothing.

Jack has therefore concluded that 250 years ago, Canada had already gone wireless."

Just makes you darn proud to be Canadian, don't it!
